Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 October 2007.

DETAILED ACTION

Oath/Declaration

The reissue oath/declaration filed with this application is defective because it fails to identify at least one error which is relied upon to support the reissue application. See 37 CFR 1.175(a)(1) and MPEP § 1414. A new oath/declaration must be filed. Receipt of an appropriate supplemental oath/declaration under 37 CFR 1.175(b)(1) will overcome this rejection under 35 U.S.C. 251.

The refiling of the declaration filed on October 4, 2007 with a current date and the signatures of all of the inventors is required to overcome this rejection.

Reissue Applications

1. Claim 1 is rejected under 35 U.S.C. 251 as being an improper recapture of broadened claimed subject matter surrendered in the application for the patent upon which the present reissue is based. See *Pannu v. Storz Instruments Inc.*, 258 F.3d 1366, 59 USPQ2d 1597 (Fed. Cir. 2001); *Hester Industries, Inc. v. Stein, Inc.*, 142 F.3d 1472, 46 USPQ2d 1641 (Fed. Cir. 1998); *In re Clement*, 131 F.3d 1464, 45 USPQ2d 1161 (Fed. Cir. 1997); *Ball Corp. v. United States*, 729 F.2d 1429, 1436, 221 USPQ 289, 295 (Fed. Cir. 1984). A broadening aspect is present in the reissue which was not present in the application for patent. The record of the application for the patent shows that the broadening aspect (in the reissue) relates to subject matter that applicant previously surrendered during the prosecution of the application. Accordingly, the narrow scope of the claims in the patent was not an error within the meaning of 35 U.S.C. 251, and the broader scope surrendered in the application for the patent cannot

be recaptured by the filing of the present reissue application. In the instant case, the omitted limitations "a third and two thirds" and "to 45-degree angles from the vertical" were originally surrendered by applicant to obviate Examiner Moy's rejection, thus resulting in improper recapture of surrendered subject matter.

Conclusion

Based on amendments agreed to in the interview of February 11, 2008, the examiner recommends that a new amended claim be filed starting with claim 1 of current Patent 6,481,591 and amending it as follows:

A partially collapsed hamper having a cylindrical upright state and a polygon-shaped ball expanded state, comprising a top and a bottom circular frame, a plurality of pivoting vertical leg members extending between the top and bottom circular frames, a body of flexible sheet material extending from the top circular frame down to and enclosing the vertical legs and bottom circular frame, said vertical leg members are connected to the top and bottom circular frames by hinges, each vertical leg member divided into at least three equal length parts and joined together by at least two hinges at equidistant points a third and two thirds of the length of each leg member, the improvement comprising said hinges that lock and said leg members in the vertical position until downward pressure is applied to unlock the hinges and cause movement of said [move the top third and bottom third portions of the] leg members outward and away from the center to 45-degree angles from the vertical forming a polygon-shaped ball where said hinges again lock in place while the middle third portion of said leg members remain in the upright vertical orientation.
